

PATIENTS AMONG US

At the age of 12, Alex was diagnosed with Severe Aplastic Anemia. To fight this disorder, he underwent a bone marrow transplant, donated by his mom, Kris.

Alex had undergone more than 15 surgeries, received regular platelet transfusions and at one point, received daily red cell transfusions as part of his treatment.

Today, Alex still receives blood products on a monthly basis, but is as active as any college student. He is a Sophomore at Central Connecticut State University, studying Accounting and Mathematics.

Many people say they have never donated blood simply because they have never been asked.

Please, Consider Yourself Asked.

The difference you'll make in the life of a patient simply cannot be overstated.
